

OPEN REAL

ESTATE

SUMMARY REPORT

1 INTRODUCTION

1.1 PURPOSE

This Open Real Estate Test Report provides a summary of the results of tests performed as outlined within this document.

Project Name: Open Real Estate

System Name: Windows 11 Pro, Version 21H2, OS Build 22000.1098

2 TEST SUMMARY

The features that were tested belonged to four main functionalities within the web application. They respectively are:

- The Sign-Up Functionality
- The Login Functionality
- My Listings Functionality
- My data Functionality

Testing was conducted in order to validate that these core functionalities perform their functions correctly and that no defects are present in the product before launching it in production.

Testing was conducted in accordance with the Test Plan. A total number of 23 tests were delineated, as per the Test Scenario document. The tests all ran successfully with no feature being blocked by any issue.

3 TEST RESULTS

No issues were found in the Sign-Up and Login functionalities. The My Listings and My data functionalities on the other hand displayed some issues related to the validation of inputs. Certain fields allowed for invalid characters to be inputted, contrary to the specifications of the Software Requirements.

Some other issues were present with the incorrect warnings displayed when inputting invalid data, as well as with the incorrect display of videos on the listings.

Overall 23 tests were conducted, from which 19 passed and 4 tests failed. None of the tests were blocked.

The failed test identified some bugs, as per the below description:

My Listings Functionality:

1. **Test Title:** Field validation of a listing creation using only the required fields.

Description: When trying to create a listing and inputting a negative number as the value asked for the property, the system doesn't save the listing, but the warning displayed incorrectly prompts the user to not leave the field blank, as opposed to prompting that the value is invalid.

Severity: Low

2. **Test title:** Validate the Youtube video embedding functionality

Description: When creating a listing and trying to embed a video from youtube by providing a URL, the listing is saved, but the video is displayed incorrectly when opening the saved listing.

Severity: Low

3. **Test title:** Validate the number of files upload functionality

Description: When creating a listing and trying to embed a video from youtube by providing a URL, the listing is saved, but the video is displayed incorrectly when opening the saved listing.

Severity: Low

My Data Functionality

4. **Test Title:** Field validation of required fields

Description: When editing the required fields for the user, the system allows for invalid characters to be saved in the Users Name, by accepting numbers and allows invalid characters in the Phone Number field, by accepting letters.

The warning for an incorrect input appears only in the email field.

Severity: Medium
